

DATA BASE CONNECTION TEST USING ANGULAR, EXPRESS AND MONGO DB

Problem:

Design a registration form to apply higher secondary admission for students. Form should include the following details:

- Name
- Address
- Mobile
- E mail
- Gender
- Date of birth
- Course (dropdown with Biology , Computer Science, Commerce, Humanities as options)
- Button for register and cancel

When Student click register, all data should be saved in mongo Db. After successful registration, all saved data should be displayed as a table in the same page or another.

When student click on cancel all data in the text box should be reset.

Brownie Points: Apply user input validation to all fields

First Name:

Last Name:

Address

Email:
